Progress Notes by Robert Salk at 05/18/26 1329

I had the pleasure of evaluating and treating [REDACTED].
[REDACTED] is a 29 year old year-old male who presents with

ICD-10-
CM

1. Primary osteoarthritis of left ankle

M19.072

The pt is looking into receiving Supartz injections and was referred by Danny Chung. The pt had a talar allograft in 2012 in Syracuse NY. The pt has pain L ankle. He has had supartz injections, Oct and Dec 2025 that were very helpful. The pt notices pain with long periods of standing or running. The pt is doing overall better with his L ankle pain. He had some pain after long periods of standing at conference.

PAST MEDICAL HISTORY:

Medical conditions:

Medical History

No past medical history on file.

Medications: Current Medications

Current Facility-Administered Medications

Medication

- Supartz FX Inj SOSY 25 mg

Surgical History: No past surgical history on file.

ASSESSMENT:

1. Primary osteoarthritis of left ankle
S/p partial talus allograft

ICD-10-
CM
M19.072

I discussed the patient's presentation, pathophysiology and proposed treatment options.

Pt advised to avoid long-term running or high impact exercise. **Suppartz 2ml injection L ankle guided injection today. Pt tolerated procedure and anesthesia well without complication.**

All questions were answered to patient's satisfaction. The patient demonstrated understanding of diagnosis and treatment plan and wishes to proceed with the recommendations as discussed. The patient will return to clinic in 2 weeks.

Sincerely,
Robert S Salk, DPM
